OpenPOS

A Simple, Open Source POS (Point-of-Sale) System,
Powered by the MEAN Stack + Browsersync, Gulp.js

By David Kim

CS 410P: Open Source Software (Massey, Summer 2017)

Brief Overview

Who is the software intended for?

What types of problems does the software address?

A brief demo.

Lessons learned during the development process.

Maintenance and Evolution.

As well as - Community and Contribution.

Who is the software intended for?

OpenPOS is aimed towards commercial retailers and business owners looking to increase productivity by providing a cloud-based, open source Point-of-Sale system.

<https://github.com/kimdj/OpenPOS/>

Retailers who don't currently employ a modern POS system.

OpenPOS allows for immediate use and trial; anyone can simply go online, register an account and begin using the software.
